Airport Noise Zone.....	15

DEFINITIONS

Airport Noise Zone (ANZ): The area surrounding the airport where aircraft noise levels are equal to or greater than DNL 65.

Code of Maryland Regulations (COMAR): Requires the MAA to control residential and commercial development in the ANZ.

Decibel (dB): A logarithmic unit of measurement of sound intensity. "A" weighted decibels have been adjusted to account for the response of the human ear to certain sound levels.

Day-Night Average Sound Level (DNL): A measurement unit of 24 hours of noise (midnight to midnight) that accounts for the increased impact of night-time noises.

Sound Exposure Level (SEL): A term used to describe the total sound energy from a single aircraft noise event. It takes into account both the maximum noise level (Lmax) and the duration of the event.

Fourth Quarter 2013

SUMMARY

This report provides a review of the aviation noise abatement program for the fourth quarter of 2013 (October 1 to December 31). Included in this report are updates on the various types of aircraft operations, and a summary of complaints received about aircraft noise. Information on noise levels at permanent noise monitoring sites will be provided in future reports when new noise monitors are installed.

Average daily jet flights were approximately 602 per day during the 4th quarter of 2013, compared to 623 per day for the 4th quarter of 2012.

- Night-time operations averaged 61 per night for the 4th quarter of 2013, compared to 65 per night during the 4th quarter of 2012.
- The percentage of re-certified (hush-kitted) aircraft operating at Baltimore/Washington International Thurgood Marshall Airport (BWI Marshall) was 0 percent during the 4th quarter of 2013, compared to .1 percent during the 4th quarter of 2012.
- A total of 56 calls and e-mail complaints were made to the Noise Abatement Office during the 4th quarter of 2013 compared to 201 calls/e-mails during the 3rd quarter of 2012. The high number of calls is due to the closure of Runway 10/28 last summer for repaving.
- The Airport operated in west flow operations for 77 percent of the time during the 4th quarter of 2013.

Aviation News Items of Interest:

- BWI Marshall Airport has installed charging kiosks to provide power for passengers' electronic devices. These new charging stations are located in the A/B baggage claim area for Southwest Airlines and AirTran Airways and in the International Terminal lounge seating area. This is part of an ongoing effort to add charging capacity for travelers.
- In spring 2014, Southwest Airlines will add nonstop transcontinental service between BWI Marshall and Portland, Oregon as well as Oakland, California. Portland is a new market for BWI Marshall and the service to Oakland will complement other Bay Area flights to San Francisco.
- BWI Marshall was ranked the fourth highest U.S. airport for healthful dining options by the Physicians Committee for Responsible Medicine. The PCRM's 13th annual Airport Food Review found that 80% of BWI Marshall restaurants serve at least one healthy option for travelers.

Fourth Quarter 2013

AIRPORT OPERATIONS

This section provides information on various types of aircraft operations at BWI Marshall, including the percentage of re-certified aircraft operating at the airport, and the percentage of aircraft operations on each runway.

The graph below shows the average number of daily jet flights for each month, including arrivals and departures by air carrier aircraft. Twenty-four hours of flights each day are averaged for each month to arrive at the results. The average daily number of jet operations during the 3rd quarter of 2013 was 602, compared to 623 for the 4th quarter of 2012.

Fourth Quarter 2013

This graph shows night-time air-carrier jet and cargo operations. A night-time operation is defined as an arrival or departure that occurs between the hours of 10 p.m. and 7 a.m. The average number of night-time jet operations was 61 per night during the 4th quarter of 2013, compared to 65 per night for the 4th quarter of 2012. The average number of night-time cargo operations was approximately 8 per night for the 4th quarter of 2013, and 8 for the 4th quarter of 2012.

Fourth Quarter 2013

Runway Use

The MAA implemented the Preferential Runway Use System to minimize the impact of aircraft noise on neighboring communities. Aircraft departures in west flow are more desirable since a smaller population is impacted by aircraft noise than when in east flow. Wind direction, weather and operational factors determine the direction of air traffic flow. Aircraft take off and land facing into the wind for operational and safety reasons. During west flow large jet aircraft take-off primarily from Runway 28 and land on Runway 33L. During east flow large jet aircraft take-off primarily from Runway 15R and land on Runway 10. The figures below show percentages of runway use for this quarter for all jets. Historical trends for prevailing winds result in an annual average west flow of approximately 70 percent.

Jet Departures by Runway

Jet Landings by Runway

Fourth Quarter 2013

Flight Corridors

The following page shows flight corridors (air traffic patterns) for all jet operations.

The data used to create the flight corridor map was taken from the aircraft noise and flight track monitoring system located in the Division of Noise, Real Estate and Land Use Compatibility Planning. The map shows the average number of flights per day for each corridor, the percentages of arrivals for each corridor, and the number of days with no flights. The category “all jets” includes commercial air carrier aircraft and private and corporate jets.

The purpose of the corridor map is to show the actual flight patterns in use at BWI Marshall, and the average number of daily flights for each pattern for the quarter.

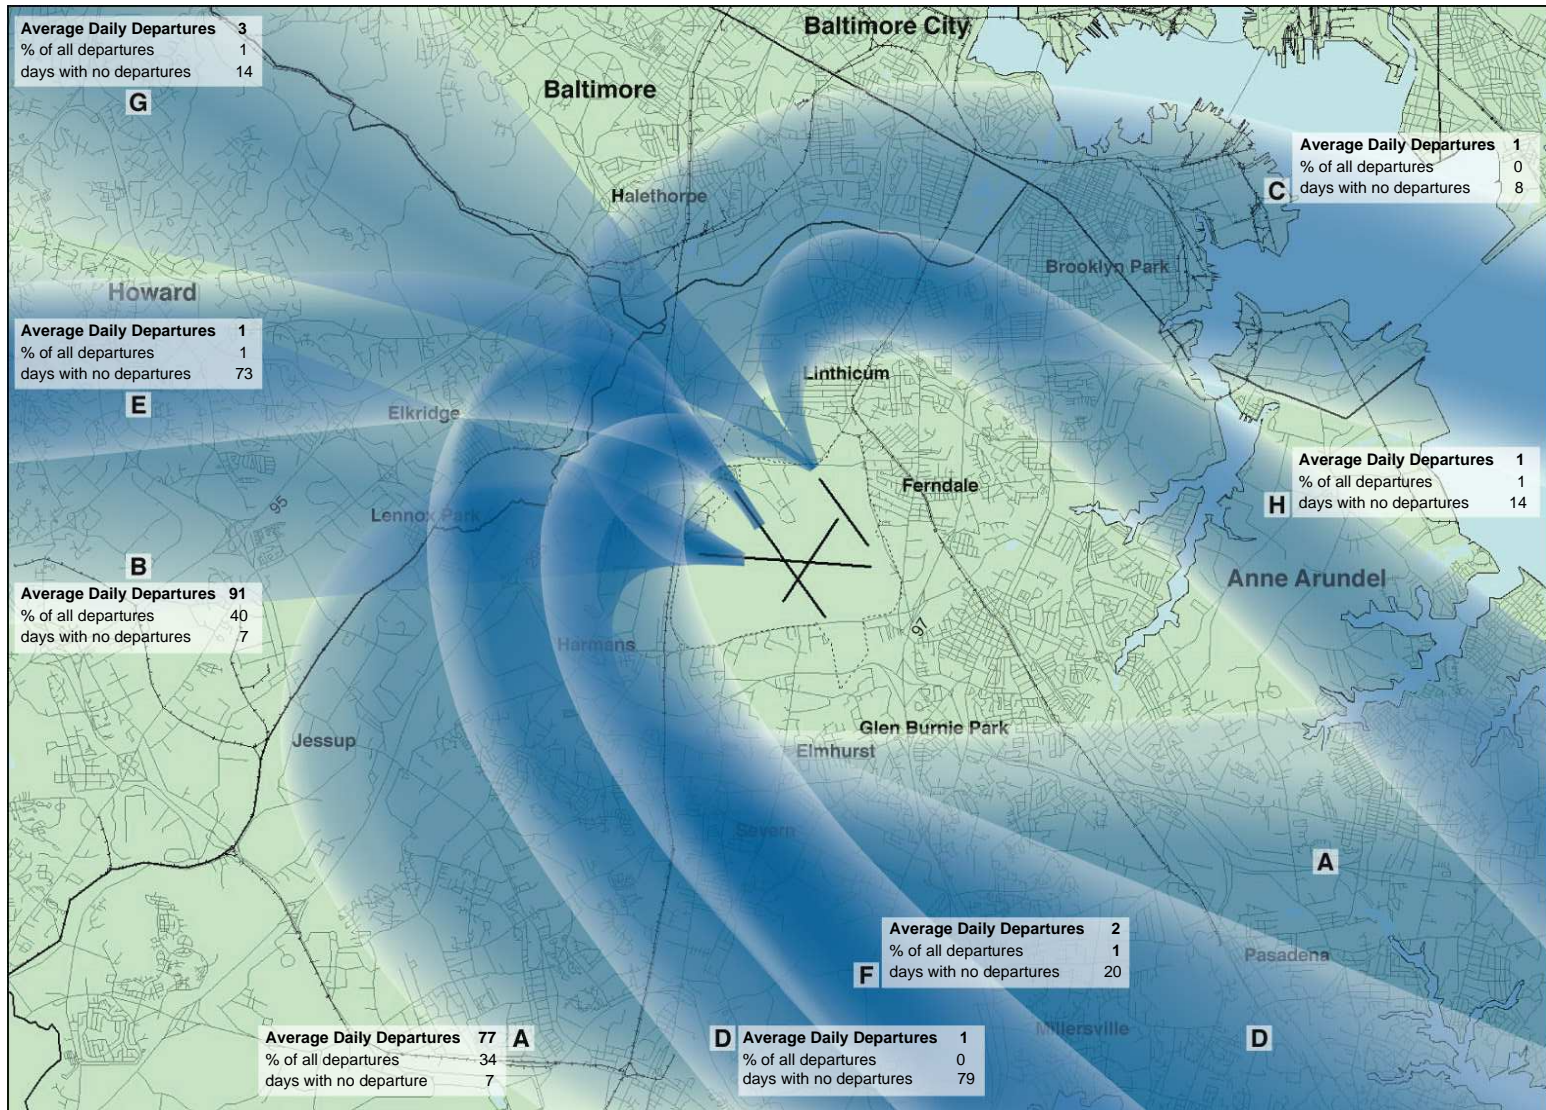

Jet Departures in West Flow shows that the most commonly used departure pattern in west flow was corridor B, accounting for 40 percent of all departures, averaging 91 departures per day.

Jet Departures in East Flow shows that the most commonly used departure pattern in east flow was corridor P, accounting for 11 percent of all departures, averaging 51 departures per day.

All Jet Arrivals shows that the most commonly used arrival pattern was corridor B, accounting for 70 percent of all arrivals, averaging 197 arrivals per day.

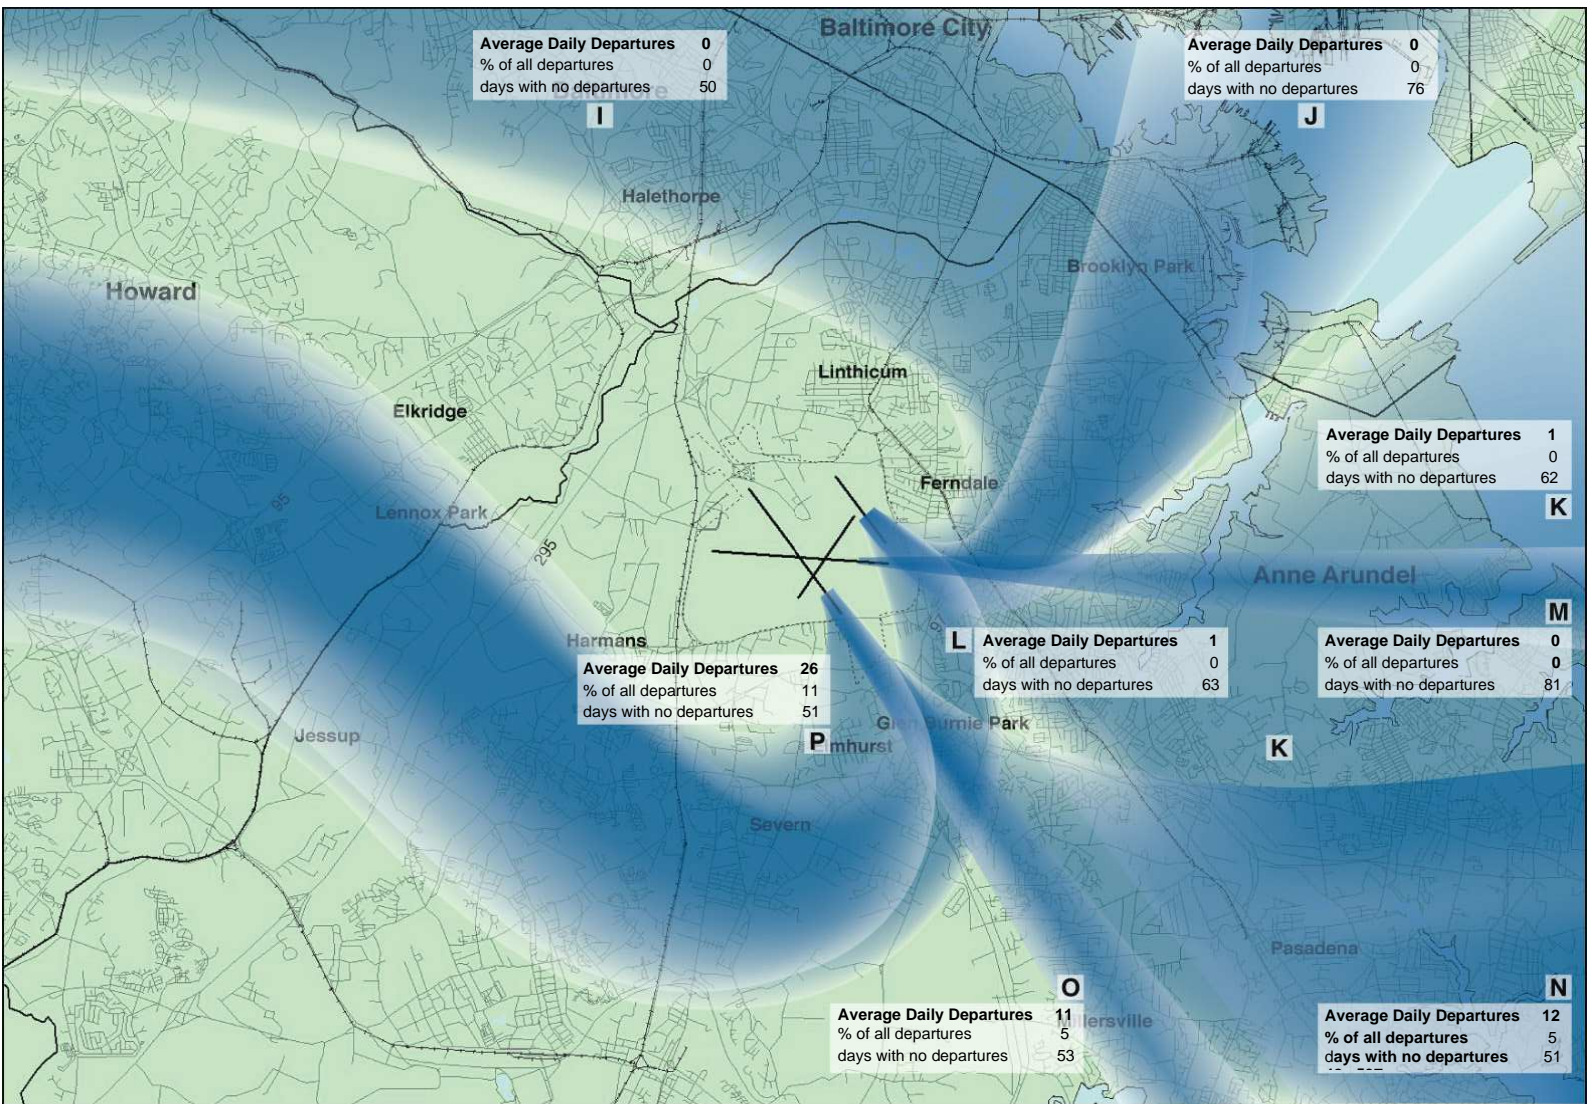

The following graphs show a larger number of departures versus arrivals. Although the total data for arrivals and departures is about the same, not all departures were identified by corridor.

AIRPORT NOISE HOTLINE CALLS

The MAA maintains a 24-hour Airport Noise Hotline at **410-859-7021**. Staff is available during normal business hours to discuss aircraft noise complaints directly with callers. Voicemail is available for recording noise complaints at night and on weekends. The graph below shows the number of calls/e-mails and callers per community for the quarter.

There were 56 calls (38 callers) during the 4th quarter of 2013 compared to 201 calls (145 callers) during the 4th quarter of 2012. The large number of calls during the 4th quarter of 2012 is due to runway closures.

Fourth Quarter 2013

OBSERVANCE OF NOISE ABATEMENT PROCEDURES

In order to encourage on-going compliance with the voluntary noise abatement procedures developed for BWI Marshall, a Quarterly Airline Performance Report is generated for the major carriers and cargo operators. Data is obtained from our noise and flight track monitoring system and the two noise abatement procedures of most interest to the local communities are evaluated. These procedures are:

1. Runway 15 Right departures initiating their right turns at, but not prior to, 1 DME
2. Runway 28 departures initiating their turns at, but not prior to, 3 DME

The following graphs were derived from the Quarterly Airline Performance Report for the 4th quarter of 2013. They show the percentage of flights for each airline which comply with each of the three procedures. DME stands for Distance Measuring Equipment, and is measured slant-range from the navigational aid located near the center of the Airport. One DME is one nautical mile.

Fourth Quarter 2013

*One flight used these runways.

COMMUNITY OUTREACH

The MAA engages in on-going efforts to enhance the level of communication and interaction between the Airport and area residents. The MAA Community Outreach Programs encourage the exchange of information between the MAA and local community groups and residences by providing a contact point for listening to and responding to Airport-related community concerns. These programs also supplement the efforts of the BWI Marshall Neighbors' Committee to promote the active participation of local residents in Airport issues.

The Division of Noise, Real Estate and Land Use Compatibility Planning keeps track of services provided to the local community to promote public education and communication, and of the number of responses to requests for portable noise monitoring. Specific services or activities provided by the MAA and the Noise Abatement Office are listed below, along with the number of contacts.

COMMUNITY ENHANCEMENT GRANT PROGRAM

Maryland Senate Bill 276 established an 11-member "Citizens Committee for the Enhancement of Communities Surrounding Baltimore/Washington International Thurgood Marshall Airport." The intent of this legislation is to provide some benefit to those citizens living in communities impacted by the daily operation of BWI Marshall by allowing them the opportunity to apply for grants for transportation-related projects such as sidewalks, speed humps, street lights, etc. These communities must be located within the most recently certified Airport Noise Zone or within two miles of the outermost noise contour.

The Community Enhancement Grant Committee met on November 6, 2013. Three grant applications were submitted for review and two were recommended for approval. The Greater Ferndale Community Civic Association was awarded \$20,769 for sidewalk renovations and Peach Orchard Civic Association will receive \$19,125 for the installation of trees for a streetscape.

NOISE MONITORING PROGRAM

The MAA operates a permanent noise monitoring system that operates 24 hours per day, seven days a week. The noise monitoring equipment in place at BWI-Marshall was installed in the late 1980's and is approaching the end of its useful life due to the age of the equipment and the inability to obtain replacement parts. The MAA is currently in the process of selecting a new system to be installed within the next 24 to 36 months. Once the new system is installed, we will resume the presentation of noise data by tables and graphs. In the meantime portable noise monitoring can be done upon request. Please contact 410-859-7380 to submit a request.

BWI MARSHALL NEIGHBORS COMMITTEE

The BWI Marshall Neighbors Committee was established in December 1983 and serves as a liaison between the Airport and the surrounding communities to ensure continuing and timely discussion of mutual airport and community interests. The committee serves as a forum for exchanging information, ideas and suggestions.

Such interests include, but are not limited to:

Fourth Quarter 2013

- (1) ground access (highways, light rail, etc.)
- (2) long-range transportation planning issues
- (3) operational changes (construction, maintenance and air traffic control)
- (4) noise abatement and other environmental issues
- (5) parking and ground transportation
- (6) land use planning.

The Neighbors Committee consists of the following groups:

- Columbia Council
- Greater Elkrige Community Association
- Elmhurst Improvement Association
- Glen Burnie Improvement Association
- Glen Burnie Park Civic Association
- Ferndale Area Community Council
- Greater Pasadena Council
- Harmans Civic Association
- Linthicum/Shipleigh Improvement Association
- Severn Improvement Association
- Timber Ridge Improvement Association

AIRPORT NOISE ZONE

The Maryland Environmental Noise Act of 1974 provides for the protection of citizens from the impact of transportation related noise. The aviation portion of the Act requires the MAA to create a certified Airport Noise Zone (ANZ) to control incompatible land development around BWI Marshall and a Noise Abatement Plan (NAP) to minimize the impact of aircraft noise on people living near the Airport. An ANZ and NAP were first established for BWI Marshall in 1976. Both were updated in 1982, 1988, 1993, and 1998. An updated ANZ was certified on November 6, 2007.

The ANZ is determined by a composite of three noise contours: a base year contour, a five-year forecast, and a ten-year forecast. The largest of the three contours in any area around the Airport determines the outline of the ANZ, thereby offering protection within the largest of the existing or future noise contours.

The contours depict the Day-Night Average Sound Level (DNL) around BWI Marshall. Both the State of Maryland and the FAA require the use of the DNL metric by all airports conducting environmental studies. The FAA also requires the use of its standard computer model for developing noise contours, known as the Integrated Noise Model (INM).

The 2007 ANZ is depicted on the following page.
